WE BUILD TRADES

RAG Knowledge Base and Business Context Pack

Purpose
A consolidated reference document for building a Retrieval-Augmented Generation (RAG) system around We Build Trades (WBT), its relationship with Trade Business School (TBS), the Trades Gang CRM, offer structure, sales funnel, fulfilment model, and content strategy.

Important scope note
This document compiles WBT-related information available from prior conversations and the context supplied for this task. It is not an independently verified or exhaustive record of every fact held by the company. Items are labelled as known, historical/contextual, or needing confirmation so the RAG system does not treat gaps or potentially dated details as current facts.

Prepared: 10 October 2026

Primary use: internal knowledge retrieval, question answering, onboarding, and identifying missing source documents.

Contents

- 1. Executive overview and positioning
- 2. Brand and business relationships: We Build Trades, We Build Assets, TBS, Agency Disrupt
- 3. Core offer and service components
- 4. Offer structure and pricing references
- 5. Sales and conversion funnel
- 6. Delivery, departments, and operational model
- 7. Trades Gang CRM and automation
- 8. Marketing and content strategy
- 9. Customer profile, pain points, and messaging
- 10. Known numbers and performance claims
- 11. RAG ingestion recommendations and metadata
- 12. Unknowns, conflicts, and facts to verify
- 13. Source and confidence register

Reading convention: statements in this document reflect information previously shared by the user unless explicitly described as an interpretation or a verification task. Older figures and offer details should be treated as historical until confirmed.

1. Executive overview and positioning

We Build Trades (WBT) is described as a business-building and systems company for trade businesses. Its positioning is not simply that of a conventional marketing agency. The central idea is to help trade-business owners build and operate with a connected system that brings together brand, website or funnel, customer relationship management, AI, automation, advertising, support, and ongoing optimisation.

WBT has been described as the execution and systems layer. Trade Business School (TBS) is the education layer, teaching trade owners how to think about and run their businesses. The distinction matters: TBS teaches foundations and business thinking, while WBT implements the operating system and execution support.

The longer-term ambition shared in prior conversations was to build a scalable, one-stop business builder for trade businesses and potentially extend the model to other niches later.

Positioning summary

- **Audience:** owners of trade businesses, with content and examples oriented toward trades such as heating, electrical, and plumbing.
- **Core promise/theme:** a joined-up system rather than disconnected marketing services.
- **Delivery style:** implementation plus technology, automation, support, and optimisation.
- **AI-first framing:** AI and automation are part of the operating system, not presented as isolated novelty features.
- **Business philosophy:** the complete system is positioned as the offer, rather than letting customers select only individual services.

RAG answer guardrail: do not claim guaranteed revenue, guaranteed lead volume, or guaranteed business outcomes unless a current approved source explicitly supports that claim.

2. Brand and business relationships

We Build Assets

Prior context describes WBT as the first entity under We Build Assets. The wider ecosystem was described as sharing systems across WBT, TBS, and Agency Disrupt. The exact legal ownership structure, current trading names, and current relationships have not been independently verified.

We Build Trades (WBT)

The customer-facing execution and systems business focused on trade businesses. WBT combines technology, marketing, automation, and implementation into a connected system.

Trade Business School (TBS)

TBS is the education layer. It teaches trade owners business thinking, foundations, operations, numbers, systems, and preparation. It has specifically been distinguished from a marketing agency, a software company, or a done-for-you service.

Agency Disrupt

Agency Disrupt was mentioned as another entity sharing systems within the wider We Build Assets ecosystem. No reliable detailed description of its current offer or relationship is available in the context retrieved for this document.

Trades Gang

Trades Gang is the white-labelled GoHighLevel CRM associated with WBT. It is described as part of the WBT system and appears in the customer funnel as the CRM destination/opt-in environment.

Entity	Role described in prior context	Confidence / caution
We Build Assets	Wider umbrella or ecosystem; WBT described as its first entity	Prior user-shared context; verify legal structure
We Build Trades	Execution, systems, implementation, marketing and automation for trade businesses	Core positioning consistently described
Trade Business School	Education, foundations, business thinking and operational preparation	Core distinction consistently described
Agency Disrupt	Shares systems in the wider ecosystem	Limited detail available
Trades Gang	White-labelled GoHighLevel CRM used in the WBT system	Technology identification shared by user

3. Core offer and service components

WBT has been described as requiring customers to take the complete system rather than purchasing isolated services. The following components have been associated with the full WBT delivery model:

- **Branding:** brand development or refinement as part of the broader business system.
- **Conversion website/funnel:** a website or funnel designed to convert prospects into enquiries or customers.
- **CRM:** Trades Gang, described as a white-labelled GoHighLevel CRM.
- **AI chatbot:** AI-enabled conversation or lead-handling capability.
- **Automation:** automated workflows supporting operational and follow-up processes.
- **Google and Meta advertising:** paid acquisition through relevant ad platforms.
- **Support:** ongoing help as part of the system.
- **Onboarding:** getting the client set up within the system.
- **Trello tracking:** project or implementation tracking was mentioned in the delivery context.
- **Testing and launch:** checking the implementation and launching it.
- **Ongoing optimisation:** improving the system after launch.

These are the components recorded in prior context, not a verified current service catalogue. Exact scope, limits, timelines, ownership of assets, ad spend treatment, support SLAs, and contractual terms are not specified here.

4. Offer structure and pricing references

Multiple offer references were shared in prior conversations. They may represent different versions of the offer or different stages of the funnel, so they should not be merged into one current price list without verification.

Offer / stage	Price or duration shared	What was described	Status
Demo / blueprint access	$47	Access to a demo or blueprint, explicitly not access to the actual system	Historical reference; verify current
TBS upsell	£297	Education offer associated with Trade Business School	Historical reference; verify current
Full done-for-you system	£20,000 per year	Recurring full system including website, CRM, AI, automation, ads and support; market exclusivity was also claimed in the shared context	Historical reference; verify currency, terms and claim
Accelerator	8 weeks	Offer/programme mentioned in the WBT offer structure	Details and pricing not available

Offer / stage	Price or duration shared	What was described	Status
Foundation Builder	12 weeks	Offer/programme mentioned in the WBT offer structure	Details and pricing not available

Important: the $47 and £297 references use different currencies, and the £20,000/year offer was described separately. The exact customer journey between these offers, whether they are still active, and whether the 8-week Accelerator and 12-week Foundation Builder are programme names, delivery tracks, or historical offer variants must be confirmed.

Market exclusivity

Prior context says the £20,000/year full system was associated with claimed market exclusivity. The exact definition, territory, trade category, conditions, duration, and legal wording are not available. A RAG assistant must not expand this into a stronger promise than the source states.

5. Sales and conversion funnel

A funnel was described with paid social acquisition, a demo page, CRM opt-in, automated follow-up, qualification, a discovery call, and a private pricing page.

Stage	Known detail
1. Paid acquisition	Facebook and Instagram ads were used. A historical figure of £62,000 spent was shared alongside 55 clients acquired.
2. Demo landing page	Prospects are directed to a landing page containing an 11-minute demo video.
3. Retargeting	Retargeting was mentioned as part of the funnel.
4. CRM opt-in	Prospects opt in to Trades Gang.
5. Follow-up	Email and Closebot AI follow-up were mentioned.
6. Intro sequence	A 21-day introductory email/engagement series was mentioned.
7. Qualification	Prospects are qualified before the sales call.
8. Discovery call	A 20-minute discovery call was mentioned.
9. Private pricing page	Qualified prospects are sent to a private pricing website containing a 21-minute product video.

Video assets recorded in context

- **11-minute demo:** described as covering trade-owner pain, limitations of traditional agencies, and the WBT website/funnel plus CRM/AI automation and ads.
- **21-minute product video:** located on a private pricing website. Its complete contents are not available in the retrieved context.

Historical acquisition figures should not be used to calculate a conversion rate without clarifying the time period, attribution window, what counts as a client, and whether spend and acquisition counts refer to the same campaign cohort.

6. Delivery, departments, and operational model

The wider operating model was described as having functional departments and a distributed fulfilment capability.

Departments mentioned

- AI
- Sales

- Operations
- Marketing
- Finance

Fulfilment capabilities mentioned

- India-based executive assistants (EAs)
- Creative and video production
- A website development team described as having 15+ developers
- IT, software, and application development
- SEO
- Trades Gang CRM
- Paid advertising

A Trello-based tracking process was also mentioned, alongside onboarding, testing, launch, support, and optimisation.

Operational caveat: team size, staffing locations, department names, vendor relationships, and tooling may change. The '15+ website developers' figure is a prior-context statement and should be dated or confirmed before being presented as current.

High-level delivery lifecycle

- Onboard the client and gather requirements.
- Build or refine brand and conversion assets.
- Configure the website/funnel, CRM, AI chatbot, and automations.
- Set up advertising and related lead-generation processes.
- Track implementation tasks, including through Trello as previously described.
- Test the system and prepare for launch.
- Launch, provide support, and optimise the system over time.

> The lifecycle above is a synthesis of the components mentioned, not a formally documented SOP. Do not represent it as an exact internal process until the company supplies its current playbooks.

7. Trades Gang CRM and automation

Trades Gang is described as WBT's white-labelled GoHighLevel CRM. It sits within the wider connected system and appears in the sales funnel as the place prospects opt into.

Related functions mentioned

- CRM and lead/contact management
- Email follow-up
- Closebot AI follow-up
- AI chatbot capability as part of the overall WBT offer
- Automated workflows supporting recurring processes
- Integration into the website/funnel and advertising journey

The exact CRM configuration, pipeline stages, custom fields, tags, calendars, messaging channels, integrations, AI prompts, data-retention policy, permissions, and failure-handling rules were not present in the retrieved context.

RAG guidance

For questions such as 'What is Trades Gang?', the answer can state that it is the white-labelled GoHighLevel CRM associated with WBT. For detailed configuration questions, the assistant should retrieve the actual CRM documentation or say the available knowledge base does not contain the configuration details.

8. Marketing and content strategy

The social content strategy was built around educating trade-business owners, demonstrating authority and proof, and showing the people and systems behind the business.

Content pillars

Pillar	Purpose / examples in context
Education	Practical trade-business tips, 'Did You Know?' hooks, and useful educational content.
Authority / Proof	Founder perspectives, client proof, client shout-outs, and evidence of expertise.
Results	Social proof and real client outcomes. A 'Real Results. Real Trades.' line was used in a client shout-out concept.
Behind-the-System	Behind-the-scenes footage, team/system clips, editing BTS, and human/team feel.

Channels and audience

- Facebook and Instagram were named as social channels.
- TikTok was listed as a channel if available.
- The target audience is trade-business owners.
- Content should communicate systems, social proof, education, and a human/team feel.

Story strategy decisions recorded

The user accepted a story strategy that included short teasers promoting reels/carousels featuring Dan or clients, ideally under 10 seconds. The user removed the concepts 'Before/After', 'weekly win', 'system snapshot', and 'case-study' from that story strategy.

Examples previously included in a story request sheet

- A business-update script for Dan.
- A reel promotion around leads not converting and the importance of follow-up.
- A static-post question sticker.
- An editing behind-the-scenes story with 'New video dropping soon'.
- A trade poll with Heating, Electrical, Plumbing, and Other options.
- An in-house team/system clip.
- A 20 to 30-second client shout-out using 'Real Results. Real Trades.'

Content principles

- Use practical hooks that trade owners can recognise quickly.
- Balance education with proof and the people behind the service.
- Promote longer reels/carousels through short story teasers.
- Keep messaging connected to business systems, lead follow-up, and operational improvement.
- Do not reintroduce concepts explicitly removed from the accepted story plan without asking first.

A prior content goal in the broader WBT/TBS work was to post roughly two-minute Instagram content daily. Confirm whether this cadence remains active.

9. Customer profile, pain points, and messaging

Audience

The primary audience described is trade-business owners. Examples of trade categories used in content planning include heating, electrical, and plumbing.

Pain points reflected in the messaging

- Leads or enquiries not converting into customers.
- Follow-up processes that are inconsistent or ineffective.
- Disconnected services or tools that do not operate as one system.
- Limitations associated with relying on a conventional agency model.
- Need for stronger foundations, operations, business numbers, and systems.

Messaging frame

The recurring message is that growth should be supported by a connected business system, rather than a collection of isolated tactics. WBT is framed as implementation and execution; TBS is framed as education and preparation.

These are messaging themes inferred from the offers and content notes, not a formally validated customer research report. Add interviews, survey results, call transcripts, and approved brand messaging when available.

10. Known numbers and performance claims

Number / claim	Context	Handling rule
£62,000 ad spend	Historical Facebook/Instagram spend figure shared in relation to the funnel	Date and campaign scope unknown; don't present as current spend
55 clients acquired	Shared alongside the £62,000 ad spend figure	Attribution period and definition of client unknown
11-minute demo	Video on the demo landing page	Known asset length; content only partially described
21-minute product video	Video on private pricing website	Known asset length; full content unavailable
21-day intro series	Follow-up sequence mentioned in funnel	Current sequence and channel details need confirmation
20-minute discovery call	Sales qualification/discovery stage	Current booking duration needs confirmation
15+ website developers	Team capacity figure shared in operational context	Historical; verify current staffing
$47 / £297 / £20,000 per year	Different offer and pricing references	Historical and potentially from different versions; verify before use

RAG safety rule for business facts: preserve the exact currency, number, qualifier, and context. Never convert, combine, annualise, or infer a metric unless a trusted source explicitly supports it.

11. RAG ingestion recommendations and metadata

The following recommendations are implementation guidance for the RAG project, not claims about WBT's current technology stack.

Suggested source hierarchy

- **Tier 1, approved current sources:** current offer/pricing documents, contracts, service scope, SOPs, official sales scripts, current website copy, current CRM documentation, and leadership-approved messaging.
- **Tier 2, internal operational sources:** onboarding checklists, delivery trackers, project templates, support FAQs, training videos/transcripts, and team playbooks.
- **Tier 3, historical/context sources:** older conversations, past marketing plans, previous pricing, outdated funnel notes, and prior campaign metrics. Preserve dates and mark these as historical.

Recommended metadata per chunk

Field	Purpose / example
source_id	Stable identifier for the source document
source_title	e.g. WBT Offer Overview
source_type	offer, SOP, sales-script, CRM-guide, marketing-plan, transcript, historical-note
brand	WBT, TBS, Trades Gang, We Build Assets, Agency Disrupt
topic	pricing, onboarding, funnel, service-scope, automation, content
effective_date	Date the source becomes valid, if known
updated_at	Date last verified or edited
status	current-approved, draft, historical, unverified
owner	Person/team responsible for the source
confidentiality	public, internal, restricted
source_location	URL, file path, CRM record ID, or transcript timestamp
confidence_note	Known directly, inferred, or needs confirmation

Chunking and retrieval

- Chunk along meaningful document headings and process steps, not arbitrary page lengths alone.
- Keep tables, pricing rows, disclaimers, and their headers together where possible.
- Preserve the source title, effective date, status, and section path in every chunk's metadata.
- Use hybrid retrieval if available: semantic retrieval plus keyword matching for exact terms such as Trades Gang, Closebot, TBS, and offer names.
- Rerank retrieved chunks and require the answer to cite the source document and section.
- For conflicting prices or processes, prefer the latest approved effective source and explicitly surface the conflict when status/date is unclear.
- Use a refusal/abstention rule for missing details: say the knowledge base does not establish the answer rather than inventing an SOP, price, guarantee, or configuration.

Suggested first-pass document collections

- Company and brand overview
- Offer and pricing
- Service catalogue and scope
- Sales funnel and sales scripts
- CRM and automation

- Client onboarding and delivery SOPs
- Marketing and content playbook
- Case studies and proof, with permissions
- Historical decisions and deprecated offers

12. Unknowns, conflicts, and facts to verify

These are the highest-priority gaps to close before using the RAG system for customer-facing answers or operational decisions.

Area	Missing / needs confirmation
Company identity	Current legal entity, registered company details, official domains, current brand relationships and approved descriptions.
Current offer	Current names, scope, eligibility, deliverables, duration, exclusions, client responsibilities, and cancellation/renewal terms.
Pricing	Whether $47, £297, £20,000/year and the 8-week/12-week programmes are current; currencies, taxes, payment schedules and upsell sequence.
Exclusivity	Exact market exclusivity promise, market definition, geography, category, duration, exceptions and approved legal wording.
Proof and claims	Evidence and definitions for £62,000 spend, 55 clients, client results, testimonials, and any performance claims.
11-minute demo	Full transcript, approved claims, CTA, audience, version date and any changes to the offer.
21-minute product video	Full transcript, current pricing page, included features, terms, and CTA.
CRM	Current Trades Gang setup, pipeline stages, tags, custom fields, automations, AI behaviour, integrations and permissions.
Delivery SOPs	Actual onboarding, implementation, QA, launch, support, optimisation, escalation and handover procedures.
Team	Current department owners, team size, contractor/vendor status, geography and responsibilities.
Marketing	Current channels, posting cadence, approved content pillars, brand voice, prohibited claims and content approvals.
Data/privacy	What personal data is collected, where it is stored, access controls, retention, consent, and approved use of AI.
TBS	Current curriculum, modules, outcomes, programme details, relationship to WBT and any current price.
Agency Disrupt	Current role and which shared systems or resources are actually common.

Priority recommendation: obtain the current offer/pricing sheet, the complete demo and product-video transcripts, the Trades Gang configuration guide, the client onboarding SOP, and the current service-delivery checklist first. These will answer a large share of likely RAG queries.

13. Source and confidence register

Sources used

- User-shared context from prior conversations about WBT, TBS, Trades Gang, offer structure, funnel, departments, fulfilment capabilities, and content strategy.
- The uploaded resume was inspected. It lists an 'AI Automation Intern' role at IPRODUCTIONS from October 2025 to February 2026, with bullets about AI agent workflows, automation pipelines, operational efficiency, and AI-based

solutions from prototype to working demo. The user has stated that this internship context is basically WBT-related for the current project.

- The resume itself does not mention WBT by name, nor does it independently verify the company details in this document.

Confidence labels used

Label	Meaning
Known from prior user-shared context	Directly present in retrieved prior-conversation notes, but may still be historical.
Historical / verify	A date-sensitive offer, number, process, team detail, or campaign figure that may no longer be current.
Synthesis	A reasonable organisation of multiple known facts, not a verbatim official SOP or approved claim.
Unknown / gap	The available context does not establish the answer; retrieve an authoritative source or ask the owner.

Final note: this is a seed knowledge pack. It is useful for starting the WBT RAG architecture and mapping the information domains, but it should not be treated as a complete corporate knowledge base until the missing first-party documents are ingested and conflicting historical details are resolved.
